CLAIMS

What is claimed is:

1—56. (canceled.)

57. A computer-implemented method for automatically creating linked computer context, comprising:

    a) removing user-selected content from a parent context;

    b) creating and automatically naming a new context comprising said user-selected content; and

    c) inserting a reference to said new context in said parent context, wherein said reference comprises a uniquely identifying function of a name of said new context,

wherein said reference is inserted in the place of said removed user-selected content, and wherein the method is used for purposes comprising web authoring, hypertext editing, and weblogging.

    58. The method of claim 57, wherein said parent context and said new context are selected from the group consisting of files, web pages, windows, frames, buffers, and sticky notes; or wherein said name comprises a uniquely identifying function of a timestamp at which said new context creation occurs; or wherein said reference is a hyperlink.

59. (canceled.)
